## INTRODUCTION

Since 1998, the California Youth Advocacy Network (CYAN), a project funded by the California Department of Public Health - Tobacco Prevention Program, has been supporting colleges and universities in creating healthy campus environments by adopting and implementing smoke/tobacco-free policies. CYAN's College Program is the longest-running program focused on smoke and tobacco-free college campuses in the nation. In 2002, a group of students formed COUGH (Campuses Organized and United for Good Health), a statewide movement committed to promoting, establishing, and sustaining safer and healthier colleges through smoke/tobacco-free policy advocacy, education, and treatment. Together, CYAN and COUGH have been working to advance the success of 100% smoke/tobacco-free policies at all institutions of higher learning in California.

Each spring, CYAN reviews and assesses current smoke and tobacco use policies at all public and private colleges and universities in the state. These findings are shared in the annual California College and University Smoke/Tobacco-Free Policy Report Card. The first statewide Report was released in June 2016 and highlighted data from all public colleges and universities. In 2022, CYAN released the first annual Report Card on smoke/tobacco-free policies at private colleges and universities that are members of the Association of Independent California Colleges and Universities (AICCU). The 2023 Report Card includes combined data for all public and AICCU colleges and universities.

The purpose of the Report is to reveal tobacco use policy trends on campuses in California. It is important to note that this report focuses on policies aimed at preventing and reducing the use of commercialized tobacco and nicotine products, such as cigarettes, cigars, hookah, smokeless and oral tobacco, and electronic smoking devices. Commercial tobacco is different from traditional or sacred tobacco. Traditional tobacco is natural, not inhaled or addictive, and has no additives.<sup>1</sup> Additionally, the aim of the Report Card is to educate and encourage college decision makers to adopt comprehensive smoke/tobacco-free policies that promote health and wellness for all members of their campus community.

# SMOKE AND TOBACCO-FREE POLICY RATIONALE

## POLICY RATIONALE

In 2021, cigarette smoking increased among college students from 4.1% in 2020 to 5.9%. While an increase in cigarette smoking was noted, young adult students continue to vape at higher rates than use of combustible tobacco products. Approximately 20% of students reported past 30-day vaping of a nicotine device.<sup>2</sup> One national study concluded that college attendance may reduce a young adults' risk of cigarette smoking but may no longer reduce the risk of using other tobacco products.<sup>3</sup>

An effective strategy for preventing young people from becoming addicted to tobacco and nicotine and supporting those who are quitting is the adoption of smoke and tobacco-free policies. Smoke and tobacco-free environments positively shift social norms around commercial tobacco use. For these reasons, the young adult years are also a critical time to ensure tobacco-free environments. As the demographic of commercial tobacco use in young adults shifts toward e-cigarettes and higher rates of incoming students are already using tobacco products, California colleges have an opportunity to influence the health behaviors of these young adults through campus policy. Despite this, college and university campuses often act as a stronghold of commercial tobacco-use, a place where smoking and vaping are still the norm, in an increasingly smoke and tobacco-free world.

In order to counter the negative effects of tobacco on the college population, the American College Health Association (ACHA) has recommended all colleges and universities adopt a 100% smoke/tobacco-free campus policy.<sup>4</sup> Furthermore, organizations such as the American Cancer Society, The Truth Initiative, and CVS Health have contributed millions of dollars in grant funding to colleges and universities across the nation in an effort to produce the first commercial tobacco-free generation.

The adoption of smoke/tobacco-free policies on college campuses nationwide continues to increase. In Spring 2008, approximately 75 colleges had 100% smoke-free policies. **As of April 1, 2023, that number has risen dramatically with 2,612 U.S. and tribal colleges and universities adopting 100% smoke-free policies. Of these campuses, 2,199 schools are 100% smoke and tobacco-free and prohibit the use of all tobacco products on college/university property.**<sup>5</sup>

National trends are consistent with what has been observed in California. In Spring 2008, only eight (5%) public colleges in the state were 100% smoke or tobacco-free. **By Spring 2023, 109 (73%) of public colleges and universities in California are now 100% smoke or tobacco-free.**

As more institutions of higher education adopt and implement strong smoke and tobacco-free policies, we gain a greater understanding of the impact of these policies. This knowledge along with findings from research conducted on the impact of other smoke and tobacco-free policies provide a strong rationale for why colleges and universities across the nation continue to adopt 100% smoke/tobacco-free policies.

CA PUBLIC COLLEGES AND UNIVERSITIES:  
100% SMOKE OR TOBACCO-FREE

## DECREASE EXPOSURE TO SECONDHAND SMOKE AND AEROSOL

- The Surgeon General of the United States concluded that there is no risk-free level of exposure to secondhand smoke and establishing smoke-free environments is the only way to prevent exposure.<sup>6</sup>
- E-cigarette aerosol contains volatile organic compounds (VOCs) and ultrafine/fine particles.<sup>7</sup>

## CHANGE TOBACCO USE BEHAVIOR

- Smoke-free campus policies are proven to decrease current smoking prevalence in students, decrease the number of cigarettes used by those who continue to smoke, positively influence students' perception of peer smoking, change social norms around tobacco use, and increase favorable attitudes towards regulation of tobacco.<sup>8</sup>

## DECREASE TOBACCO PRODUCT WASTE ON CAMPUS

- 100% smoke/tobacco-free policies are associated with reduced tobacco waste near building entrances compared with campuses with weaker policies. These reductions may reflect fewer cigarettes smoked near buildings and reduced exposure to secondhand smoke.<sup>9</sup>
- By eliminating tobacco product waste (i.e., cigarette butts, pods, disposable vapes), colleges are also decreasing fire risk on campus, reducing the cost and time associated with cleaning up tobacco product waste, and increasing campus beautification.

## PROMOTE STUDENT SUCCESS

- Students experiencing mental health conditions such as depression, anxiety, and stress have significantly higher rates of tobacco and marijuana use. It is a common misperception that substance use relieves these mental health conditions; however, research shows tobacco use exacerbates symptoms. A Truth Initiative survey found that a large majority of young people who have used e-cigarettes started vaping to lessen feelings of stress, anxiety, or depression, and many continue vaping to cope with these feelings.<sup>10</sup> Policy and education efforts aimed at preventing and treating tobacco use significantly improve overall health and mental well-being of students.
- As students graduate, they are transitioning into tobacco-free environments. In California, the majority of hospitals and K-12 campuses are 100% smoke-free or tobacco-free. Nationwide, worksites, college campuses, health care centers, and outdoor recreational facilities are adopting comprehensive tobacco use policies.

## DECREASE EXPOSURE TO NEW AND EMERGING TOBACCO AND NICOTINE PRODUCTS

- In California, young adults are significantly more likely to use e-cigarettes than those 26 and older.<sup>11</sup>
- The use of products that mimic tobacco use, specifically e-cigarettes, may renormalize smoking and challenge the implementation and enforcement of tobacco-free policies that are proven to decrease tobacco use.
- Heated tobacco products, nicotine pouches, and "disposable" vapes are increasing in popularity due to their high nicotine content and subtle stealth designs that make them harder to identify.<sup>12</sup>

# SCORING METHODOLOGY

CYAN maintains a database of tobacco use policies from all public colleges and universities in California. Policies have been collected and analyzed since 2001. The database is updated a minimum of two times per academic year. CYAN staff and COUGH student leaders utilize the database to track progress on the adoption and implementation of smoke/tobacco-free policies.

CATobaccoFreeColleges.org

## DATA COLLECTION

The policies found in CYAN's database are collected from college/university websites, school catalogs, campus administrations, and District governing boards (California Community College system). Print copies of these policies are kept on file and the date of collection and review is noted on the policy. If CYAN is unable to locate an official written policy, the policy noted in the college/university catalog and/or manuals are collected as policy on file.

## DATE OF POLICY REVIEW

CYAN staff did an extensive policy review of all 149 public college and university policies and 109 AICCU member institutions in April and May 2023. Policies officially adopted by May 15, 2023, were reviewed for this Report. If a college/university adopted a policy but the policy has not been implemented, the official adopted policy is what was reviewed and scored. If a college is considering a new policy, but it has not been finalized and signed by the administration, the current policy implemented on campus is the policy that was scored for this report.

## PUBLIC COMMUNITY COLLEGES: DISTRICT POLICIES VERSUS CAMPUS POLICIES

Community college districts have the authority to regulate tobacco use on the campuses within their district. Some districts create district-wide smoke/tobacco-free policies for all of the colleges within the district while others have a standard policy for the district but allow individual colleges to adopt stronger policies. Regardless of who has the authority to adopt a smoke/tobacco-free policy (i.e., district versus campus), CYAN reviewed the tobacco use policies from all 116 community college campuses. In many cases, these policies were the same as the district policy. In some cases, a college's policy was either stronger or weaker than the district policy. If a campus policy was found to be weaker than the district policy, the campus policy is the policy that was scored. The Report authors recognize district policies are the minimum policy a college must have; however, if a college's policy is weaker than a district's policy, it is noted in this report in order to encourage administration to strengthen their smoke/tobacco-free policy to the district policy or stronger.

## PRIVATE COLLEGES WITH INDIVIDUAL OR SHARED BUILDINGS

A number of private institutions lease space in buildings or have campuses with one large building. Regardless of campus space, policies were reviewed based on policy language. If an institution has a shared, leased, or single space, their campus may be smoke or tobacco-free if they prohibit smoke/tobacco use within a certain distance of buildings. However, if the policy does not acknowledge that it is intentionally smoke or tobacco-free, the policy is scored as an entryway or perimeter policy.

## POLICY ANALYSIS AND GRADING

All public college/university tobacco use policies were reviewed and scored using the same scoring instrument. Only written policies were analyzed for this report. CYAN did not take into consideration how well a policy was implemented or enforced.

### A TOTAL OF SEVEN POLICY TYPES WERE IDENTIFIED AND USED TO SCORE POLICIES INCLUDING:

- 1. 100% Smoke/Tobacco-Free, including electronic smoking devices** - Smoking, the use of tobacco products, and the use of electronic smoking devices are prohibited on all indoor and outdoor property. Products covered under this policy include, but are not limited to, cigarettes, cigars, pipes, water pipes (hookah), e-cigarettes, smokeless, and oral tobacco.
- 2. 100% Smoke/Tobacco-Free** - Smoking and the use of tobacco products are prohibited on all indoor and outdoor property. Products covered under this policy include, but are not limited to, cigarettes, cigars, pipes, water pipes (hookah), smokeless, and oral tobacco products.
- 3. 100% Smoke-Free** - Smoking of tobacco products is prohibited on all indoor and outdoor property. Products covered under this policy include, but are not limited to, cigarettes, cigars, pipes, and water pipes (hookah).
- 4. Parking Lots Only** - Smoking and/or the use of tobacco products is prohibited on campus with the exception of parking lots or designated areas in parking lots.
- 5. Designated Smoking Areas** - Smoking and/or the use of tobacco products is prohibited on campus with the exception of designated smoking areas on campus.
- 6. Perimeter or Entryways** - Smoking and/or the use of tobacco products is prohibited within a certain distance from buildings, entranceways, exits, windows, and/or air intake units. Policy must prohibit smoking 20-ft or more from buildings (current state law prohibits smoking within 20-ft of state-owned buildings).
- 7. Policy not in compliance with current state law** or no written policy available from college. California state law prohibits smoking within 20-ft of state-owned buildings and in all indoors spaces for private and public institutions.

If an institution's smoke/tobacco-free policy included language on electronic smoking devices or e-cigarettes, the campus was awarded 5 bonus points. Colleges with 100% smoke/tobacco-free policies, including electronic smoking devices, did not receive additional bonus points as the points were build in to the final score.

Once scores were finalized, colleges were assigned a grade based on the policy score they received.

## OVERALL SMOKE/TOBACCO-FREE POLICY GRADES

POLICY TYPE	SCORE	GRADE
100% smoke and tobacco-free, including e-cigarettes	100 POINTS	A+
100% smoke and tobacco-free	95 POINTS	A
100% smoke-free, including electronic smoking devices	90 POINTS	A
100% smoke-free	85 POINTS	B
Parking lots only, including electronic smoking devices	75 POINTS	C
Parking lots only	70 POINTS	C
Designated smoking areas, including electronic smoking devices	65 POINTS	D
Designated smoking areas	60 POINTS	D
Perimeter or Entryways, including electronic smoking devices	35 POINTS	F
Perimeter or Entryways	30 POINTS	F
No written policy or policy not in compliance with current state law	0 POINTS	F

### RATIONALE FOR LOW SCORES FOR DESIGNATED SMOKING AREA POLICIES

Designated smoking area policies, including policies that limit smoking to parking lots only, may seem like a good idea to allow individuals who use tobacco a place to smoke or vape; however, they have many more disadvantages than benefits. A study from Stanford University found that in outdoor designated areas with multiple smokers, levels of toxic air contaminants from secondhand smoke may be the same or higher than indoors, therefore, creating a hazardous environment for individuals standing in or around these areas.<sup>13</sup> Additionally, secondhand smoke is proven to travel outside of designated areas.

Areas designated for tobacco use have also been found to encourage smoking and vaping by creating a social environment for use. By increasing the number of individuals smoking or vaping in one area, students are more likely to believe that more people use tobacco than actually do. This misperception affects the norm of tobacco use on campus and may also contribute to increased use. Finally, designated areas are often heavily littered and smell of toxic tobacco waste. Unless regularly cleaned and maintained, these areas are unhealthy, smelly, and an eyesore.

# PUBLIC SCHOOL - REPORT FINDINGS

## STRONG COMPREHENSIVE POLICIES

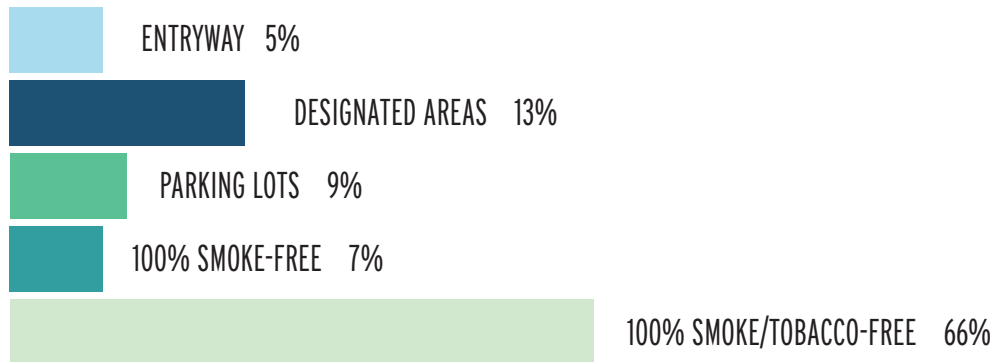

Of the 149 public colleges and universities, 109 are 100% smoke-free or tobacco-free, including electronic smoking devices. During the 2022-2023 academic year, three community colleges adopted a 100% smoke or tobacco-free policy. All three campuses that adopted new policies, **Los Angeles Southwestern College, Mt. San Antonio College, and West Los Angeles College**, are in Los Angeles County, regions 7 and 8.

109 OF CALIFORNIA'S 149 PUBLIC COLLEGES AND UNIVERSITIES ARE 100% SMOKE OR TOBACCO-FREE

## SMOKE/TOBACCO-FREE POLICIES BY TYPE

A majority (73%) of public institutions of higher education are 100% smoke or tobacco-free. A significant amount of progress has been made in the adoption of 100% smoke or tobacco-free policies with only 5% of public campuses having entryway/perimeter policies or no written policy.

## SMOKE/TOBACCO-FREE POLICIES BY SYSTEM

### UNIVERSITY OF CALIFORNIA

The University of California (UC) system, including 10 educational campuses and five medical hospitals, is 100% smoke and tobacco-free, including electronic smoking devices. The entire system went smoke and tobacco-free in January 2014 after a system-wide policy was adopted by the University of California Office of the President in January 2012 (UCLA, UCSF, and UCSD implemented policies prior to this date).

### CALIFORNIA STATE UNIVERSITY

In April 2017, the California State University system adopted a 100% smoke and tobacco-free policy, including electronic smoking devices. The executive order signed by Chancellor White, required all 23 CSU campuses to implement a comprehensive smoke/tobacco-free policy by September 1, 2017. The system-wide policy has resulted in all public four-year universities in California being 100% smoke/tobacco-free institutions.

**100%**  
SMOKE/TOBACCO-FREE  
INCLUDING E-CIGARETTES

UNIVERSITY OF CALIFORNIA  SINCE 2014

CALIFORNIA STATE UNIVERSITY  SINCE 2017

### CALIFORNIA COMMUNITY COLLEGE

Currently, 66% (76/116) are 100% smoke or tobacco-free. Of these, 65 campuses are 100% Smoke and Tobacco-Free, including e-cigarettes and 11 campuses are 100% smoke-free, including e-cigarettes.

In May 2018, the Board of Governors for the California Community College system adopted a resolution to provide guidance and support for all California Community Colleges to adopt and implement 100% smoke and tobacco-free policies. In January 2023, the Community College League of California Board of Directors adopted a motion to update the League’s model tobacco use policies and procedures (AP/BP 3570) to only include 100% smoke and tobacco-free language.

100% SMOKE OR TOBACCO-FREE  
COMMUNITY COLLEGES

### FOUR-YEAR INSTITUTIONS VS. TWO-YEAR INSTITUTIONS

California is home to 33 public four-year institutions (10 UC, 23 CSU) and 116 two-year colleges. When comparing data collected from UC/CSU campuses and community colleges, some interesting findings were made.

- 66% of community colleges are 100% smoke or tobacco-free compared to 100% of UC and CSU campuses
- 96% of community colleges include e-cigarettes in their policies compared to 100% of UC and CSU campuses

COMMUNITY COLLEGE  
CAMPUSES

UC AND CSU  
CAMPUSES

100% SMOKE/TOBACCO-FREE

INCLUDE E-CIGARETTES IN POLICIES

# PRIVATE SCHOOL - REPORT FINDINGS

## STRONG COMPREHENSIVE POLICIES

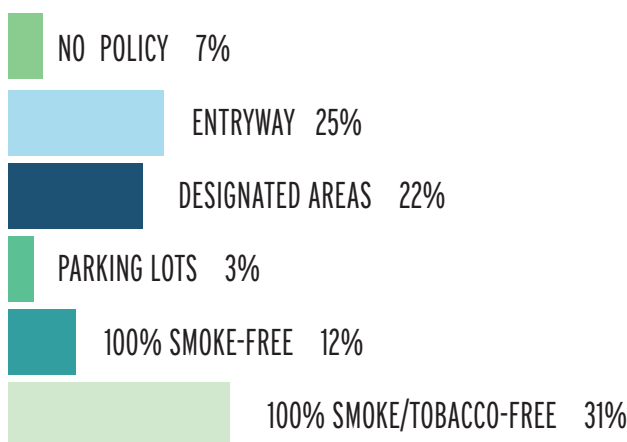

Of the 109 AICCU member private colleges and universities, 47 of 110 colleges and universities are 100% smoke-free. Of these, 34 campuses are 100% smoke and tobacco-free, including electronic smoking devices.

47 OF CALIFORNIA'S 109 PRIVATE COLLEGES AND UNIVERSITIES ARE 100% SMOKE OR TOBACCO-FREE

## SMOKE/TOBACCO-FREE POLICIES BY TYPE

Approximately one-third (31%) of private colleges and universities are 100% smoke and tobacco-free. An additional 12% are 100% smoke-free and most of these campuses also prohibit the use of e-cigarettes on campus but not all do. Private institutions are more likely to have entryway policies (25%) or designated area policies (22%) than policies that limit smoking, vaping, or tobacco use in parking lots only (3%). Smoke and tobacco-free policies were not available from 7% of AICCU member institutions.

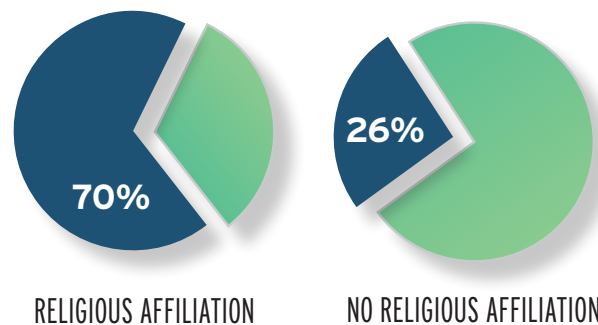

PRIVATE CAMPUSES THAT ARE SMOKE OR TOBACCO-FREE

## SMOKE/TOBACCO-FREE POLICIES BASED ON RELIGIOUS AFFILIATION

During the analysis of policies, CYAN observed differences between institutions with religious affiliations and those not affiliated with religious organizations. Many religious colleges have student codes of conduct that prohibit students from using tobacco and other substances. All these policies were reviewed to ensure tobacco use policies apply to all members of campus communities, including faculty, staff, and visitors. After a thorough review of these policies, it was found that 70% of colleges affiliated with a religious organization are 100% smoke or tobacco-free compared to 26% of colleges that are not religious.

### CAMPUS POLICIES 100% SMOKE OR TOBACCO-FREE

# COMBINED PUBLIC AND PRIVATE SCHOOL DATA

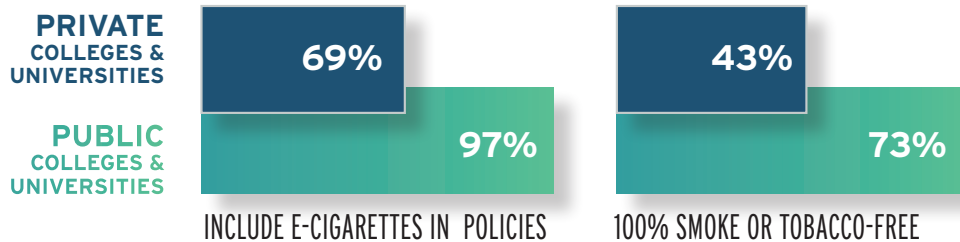

ALL CALIFORNIA COLLEGES  
100% SMOKE OR TOBACCO-FREE

## STRONG COMPREHENSIVE POLICIES

As of May 2023, 60% (156 of 258) of California college and university campuses are 100% smoke-free. Of these, 51% (132 campuses) are 100% smoke and tobacco-free, including electronic smoking devices.

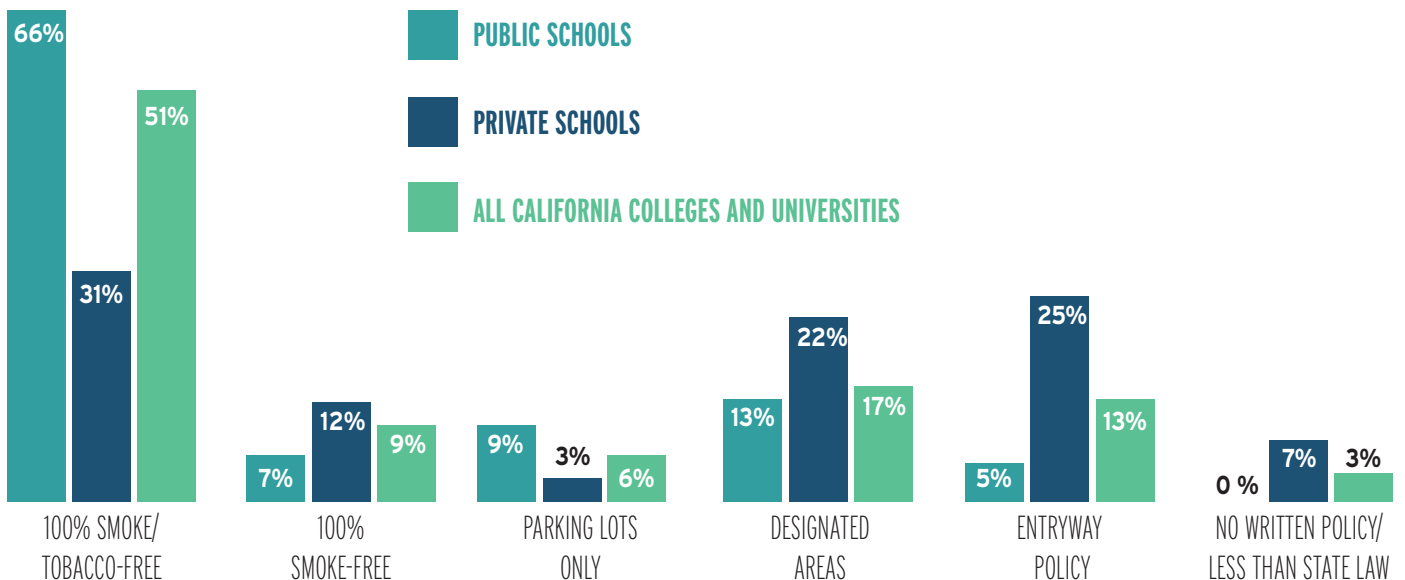

## INCLUSION OF ELECTRONIC SMOKING DEVICES IN POLICIES

Under California state law, e-cigarettes are considered a tobacco product. However, electronic smoking devices are not only used to vape nicotine solutions and can be used to vape THC solutions, herbal solutions, etc. As a result, many individuals may not consider the use of an electronic vaping device as violating a smoke or tobacco-free policy. Best practice is to include definitions within the policy that notes the use of electronic smoking devices or e-cigarettes is prohibited where smoking is not permitted.

## PRIVATE INSTITUTIONS VS. PUBLIC INSTITUTIONS

Comprehensive smoke and tobacco-free policies continue to be the most prevalent policy at colleges and universities; however, differences do exist by college/university type as noted in the policy chart.

# CONCLUSION

California colleges and universities continue to advance public health policies aimed at preventing and reducing student tobacco use. This work was maintained in 2022-2023 as several community colleges adopted new policies, others advanced policy efforts, and numerous colleges and universities expanded efforts to increase policy education, compliance, and tobacco treatment.

In the midst of dueling vaping and mental health crises among young people, it is a critical time to denormalize smoking and tobacco use and support students in living free of tobacco. A strong body of evidence shows that smoke and tobacco-free policies prevent people from starting tobacco use and also encourages individuals who do use tobacco to quit. College administrators should strongly consider implementing comprehensive smoke and tobacco-free policies; increase access to free tobacco treatment services on campus; promote existing and new smoke/tobacco-free policies to students, staff, and faculty as they return; and continue to support the overall physical and mental health of their students.

It is the hope of CYAN and COUGH that California colleges and universities will continue to work on comprehensive smoke/tobacco-free policies that promote good health and protect campus communities from the negative effects of commercial tobacco. We appreciate the opportunity to partner with all California colleges and universities as they move forward with adopting and implementing these policies or continue working on increasing policy compliance to prevent and treat tobacco and nicotine addiction.

## REPORT AUTHORS:

**California  
Youth  
Advocacy  
Network**

California Youth Advocacy Network (CYAN) provides training and technical assistance to individuals, organizations, and coalitions advocating for tobacco-free communities. CYAN works with youth, young adults, services members, and all those working with these populations on any tobacco-related issue.

It is the mission of COUGH, a statewide student-led coalition, to ensure a healthy campus environment free of tobacco and tobacco industry presence. COUGH is committed to promoting, establishing, and sustaining safer and healthier California colleges and universities through tobacco-free policy, education, and cessation.
